

Interactive comment on “Zoogeography of the bottom Foraminifera of the West-African coast” by V. Mikhalevich

R. Speijer

Robert.Speijer@geo.kuleuven.be

Received and published: 12 March 2008

The present manuscript by Mikhalevic fails to outline a background or purpose and it provides essentially a long list of names and a couple of figures. Also a discussion section is absent. Yet, the conclusions mention a 'detailed zoogeographical analysis with the thorough revision...' I wonder whether something went wrong during the submission.
